

Bottomline Print Manager

Bottomline Print Manager is the perfect complement for your Bottomline Transform or ERP system, replacing native print spooling utilities whilst adding additional levels of control and functionality to optimise your output device capabilities.

Benefits

Centralised Administration

Bottomline Print Manager gives you greater control of your output than ever before, allowing you to maximise the utilisation of your printers and fully control them from one centralised location.

- Enterprise view of jobs/docs/devices
- Automate queue creation for the enterprise in one place
- Print confirmation to the tray
- Alerts & notifications
- Advanced trouble shooting tools
- Enhanced security & user permissions
- Bandwidth solutions
- Page level re-start & reprinting
- Document viewing

Advanced Delivery

Intelligently direct your output to the best device available for the job, based on the content of the files being printed. You can do this via an intuitive menu system or through scripting for the ultimate in versatility.

- Rules based delivery
- Large job re-routing
- Colour control
- Document bundling/bursting
- Format transforms
- Tamper resistant RX printing with plain paper

Performance, Scalability, and Reliability

Enhance your scalability, reliability and security with ultimate visibility and control over your print jobs with a range of print management tools second to none.

- Increased spooler reliability
- Automated server and printer fail-over
- Load balancing
- Print release and other features

Bottomline Print Manager Advanced Delivery Pack

Context Delivery

Automate print based on data, conditions and key identifiers found in the document. You can automatically change print settings such as, change delivery destinations or even the content of the document being printed based on your rules.

Change:

- Black and white instead of colour
- Copy Count
- Job Scheduling
- User alerts/notifications
- Re-routing jobs to bundling/bursting queues
- Specific printers (ie. confidential, customer-facing, large jobs)
- Change the content of the document

Report Distributor (one job into many)

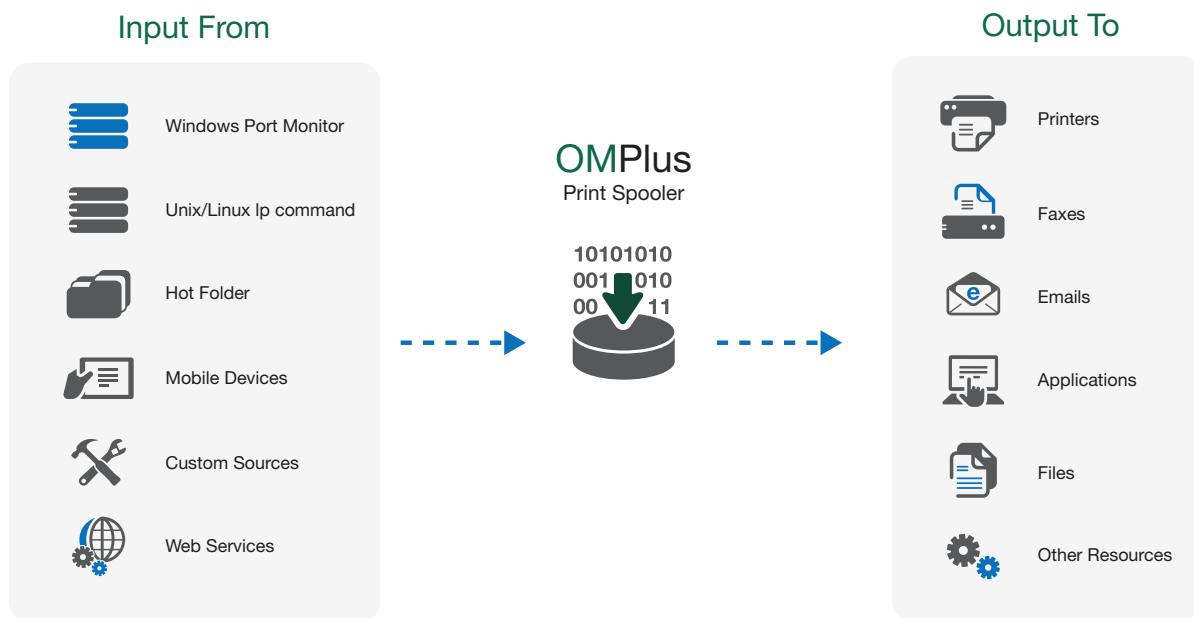

Distribute multiple copies of one report or burst large reports into individualised sub-reports based on data in the document's metadata or the document text. Send jobs directly to specific destinations such as printers, fax servers, email systems or the web as desired.

Report Bundler (many jobs into one)

Bundle multiple jobs together to form one job ensuring all related documents are delivered at a scheduled time to your desired destination. Re-sequencing eliminates problems associated with other jobs being interleaved with your print-out, and streamlines the delivery confirmation process.

Bottomline Print Manager

Bottomline Print Manager is an advanced, intelligent print spooling software designed to seamlessly complement enterprise software applications. It can receive jobs from multiple sources and seamlessly deliver them to printers, multi-function devices, fax software, email systems and more.
